Page 3 July 2015

<sup>&</sup>lt;sup>9</sup> This is strongly recommended by the utility. Best practice is to have an externally accessible, lockable, disconnect with visible open/close connection and to have appropriate signage on the disconnect, such as 'Solar PV AC Disconnect' (preferably red) and on the meter housing 'Caution, Solar Electric System'" (preferably yellow). If the disconnect is not in the immediate vicinity of the meter, please include the disconnect location on the meter signage. This enables the utility and first responders to more quickly deal with an emergency situation.

10 Yes, if your expected maximum output of the inverter (kW AC) is greater than the lowest load you anticipate at your facility

during maximum PV output (kW). The difference would be the amount you may export.
